

fanserv — Game Calendar Dashboard

Design brief for the dashboard designer

Reference: the interactive *Game Calendar* mockup shared with this brief is the approved conceptual direction. Treat it as canonical for **structure and behavior**, not for final visual design — the type, color, spacing, and overall craft are yours to elevate. All data in the prototype is [this drive folder](#).

1. Summary

fanserv sells ad inventory on live U.S. sports events across MLB, NBA, NHL, NFL, and MLS. Today the data a buyer needs — impression forecasts, "game pulse" scores, delivered impressions, revenue, and game stats — lives in separate places, with no single surface for planning a buy. We want one exploration-first dashboard where a customer can see the whole sports year, judge where the opportunity is, and drill into individual games.

2. Who it's for, and the job it does

Primary user: a **media buyer or planner** at a brand or agency. Their core job: *"Given my budget and flight window, decide which games to buy inventory on."* The design should treat **past games as evidence** (proven performance) and **future games as opportunity** (forecast + pulse), and place them on one continuum so the proof sits right next to the bet.

Success looks like: a buyer can read where opportunity concentrates across the year in seconds, move smoothly from the macro (weeks, months, quarters or years) to the micro (a single game), and feel invited to explore rather than made to hunt.

3. The concept: a calendar with game cards
